## Steel Unit Specifications

**PRE-FAB SECTIONS:** All units are made of pre-fabricated sections, 5' wide by 6' high, manufactured from 26 gauge steel, struck with a deep "V" every 4 inches. The "V" strikes add superior strength and rigidity to each section. Channel ribs are spot-welded around all the edges and down the center at the back of each section. The final result is rigid and strong, a storage unit made to last.

**ALL STEEL FLOOR:** FREE with all units. Made from heavy 14 gauge steel plate. Heavy weight steel channel ribs are welded around all edges and spaced every 22" through the center. The result is an amazingly strong foundation floor which sits off the ground just enough to allow for air circulation.

**PRE-HUNG DOORS:** All units come with a 3' wide pre-hung piano-hinged door. The door is built into the pre-fabricated section and comes supplied with with a lock and 2 keys.

**FINISHING PROCESS:** Galvannealed, ready for oil based finish paint of choice

**UNIT HEIGHT:** Our standard units are 6' high.
